

A High School Science Curriculum on Digesters

Michael R Moore
Sr. Renewable & Product Services Consultant
Wisconsin Public Service

Presentation to the Midwest Rural Energy Council,
February 19, 2015

SolarWise is a renewable energy and educational program offered by WPS Community Foundation, Inc., and is available to high schools within the WPS service area.

The SolarWise® Renewable Energy Curriculum is published as a series of 30 engaging, ready-to-use lessons. The curriculum covers general energy topics, presents an overview of all renewable energy resources, and provides an immersive education in solar power and energy conservation. One of the curriculum topics is energy from digesters.

There are also free one-day workshops to give teachers hands-on experience with the lessons.

To access educational materials for teachers, information on curriculum workshops, and information for students, visit:
